What is Data Visualization?

Visual representation of data

“Transformation of the symbolic into the geometric” [McCormick et al, 1987]

“... artificial memory that best supports our natural means of perception” [Bertin, 1967]

“Use of computer-generated, interactive, visual representations of data to amplify cognition” [Card, Mackinlay, & Shneidermann, 1999]

Why Data Visualization?

“The ability to take data –

to be able to **understand** it,

to **visualize** it,

to **communicate** it –

that’s going to be a hugely important skill in the next decades,

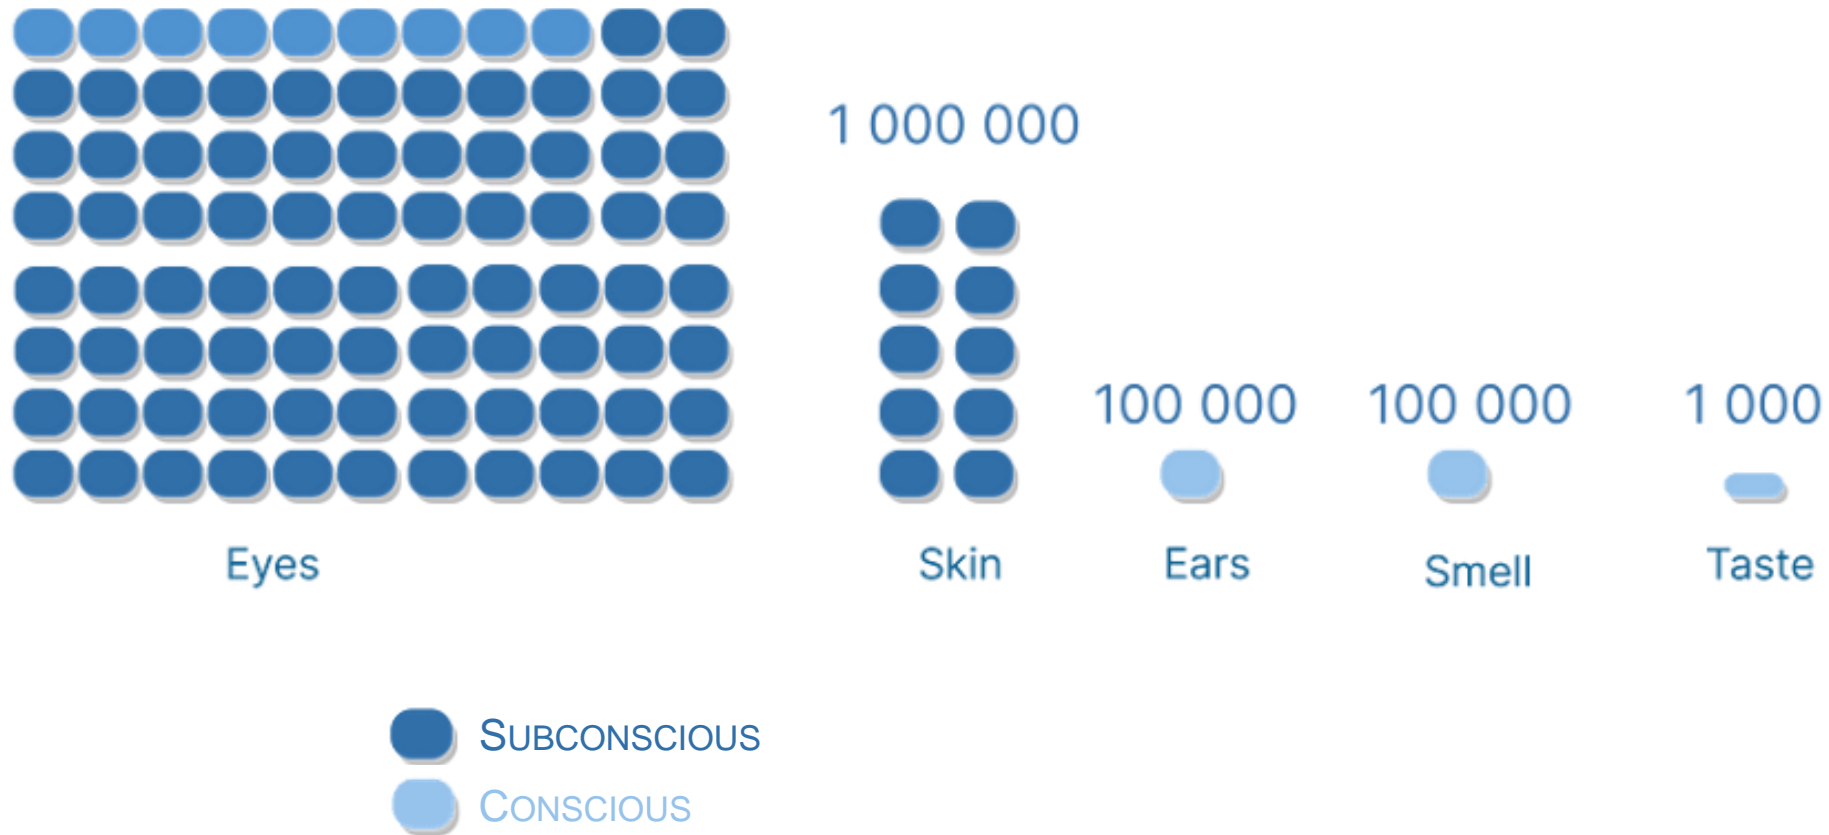

... because now we really do have essentially free and ubiquitous data.

So the complimentary **scarce factor is the ability to understand** the data and extract value from it.”

Hal Varian, Google’s Chief Economist
The McKinsey Quarterly, Jan 2009

Information transmission rates of the senses vs processing rates by conscious mind

~Bits per second

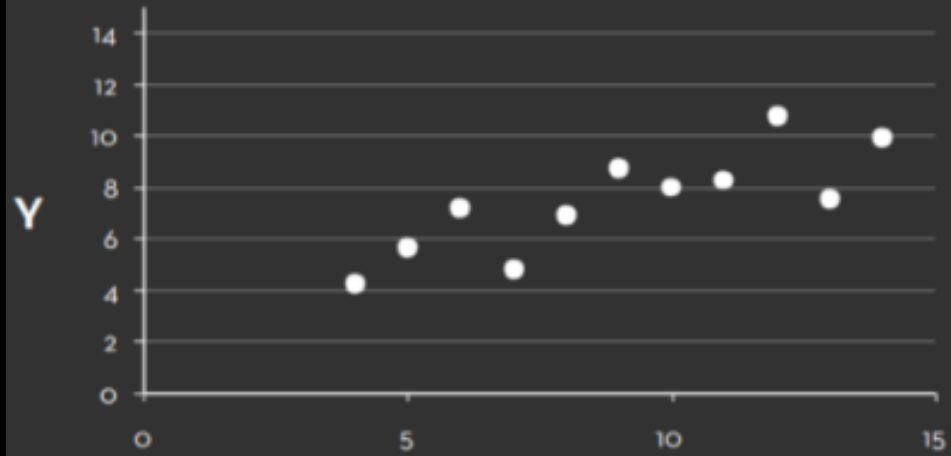

Set A		Set B		Set C		Set D

InfoGraphics vs DataGraphics

DataGraphic

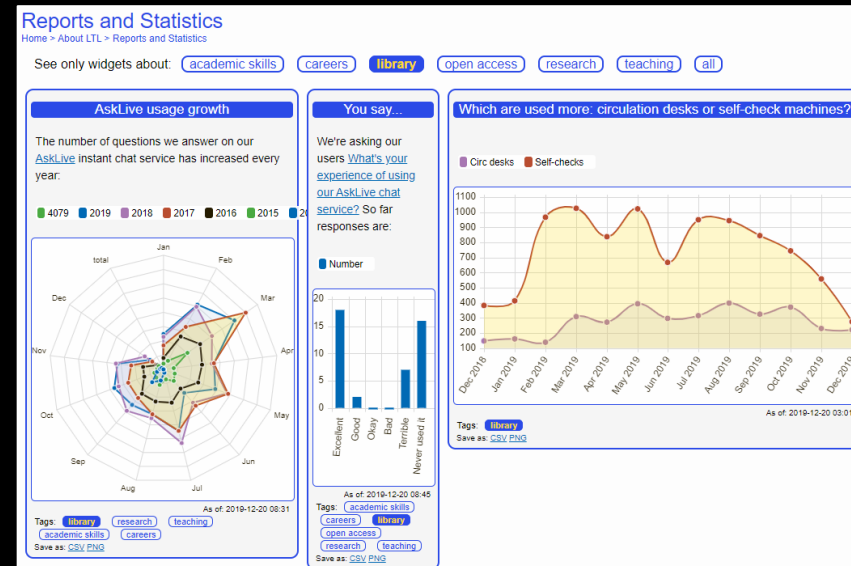

Uses words and numbers to represent quantitative data. Icon-like graphical elements for visual appeal

<https://libraries.dal.ca/about/library-assessment/library-data.html>

InfoGraphic

Visually encodes quantitative and/or qualitative data into marks, shapes, sizes, colours, etc.

<https://library2.lincoln.ac.nz/dashboard/#library>

InfoGraphic vs Data Visualizations

Infographics tell a premeditated story to guide the audience (subjective).

Data Visualizations leave the audience their own conclusions (objective).

InfoGraphic

- Best for telling a **premeditated story** and offer **subjectivity**
- Best for **guiding the audience** to conclusions and **point out relationships**
- Created **manually** for one **specific dataset**

Data Visualization

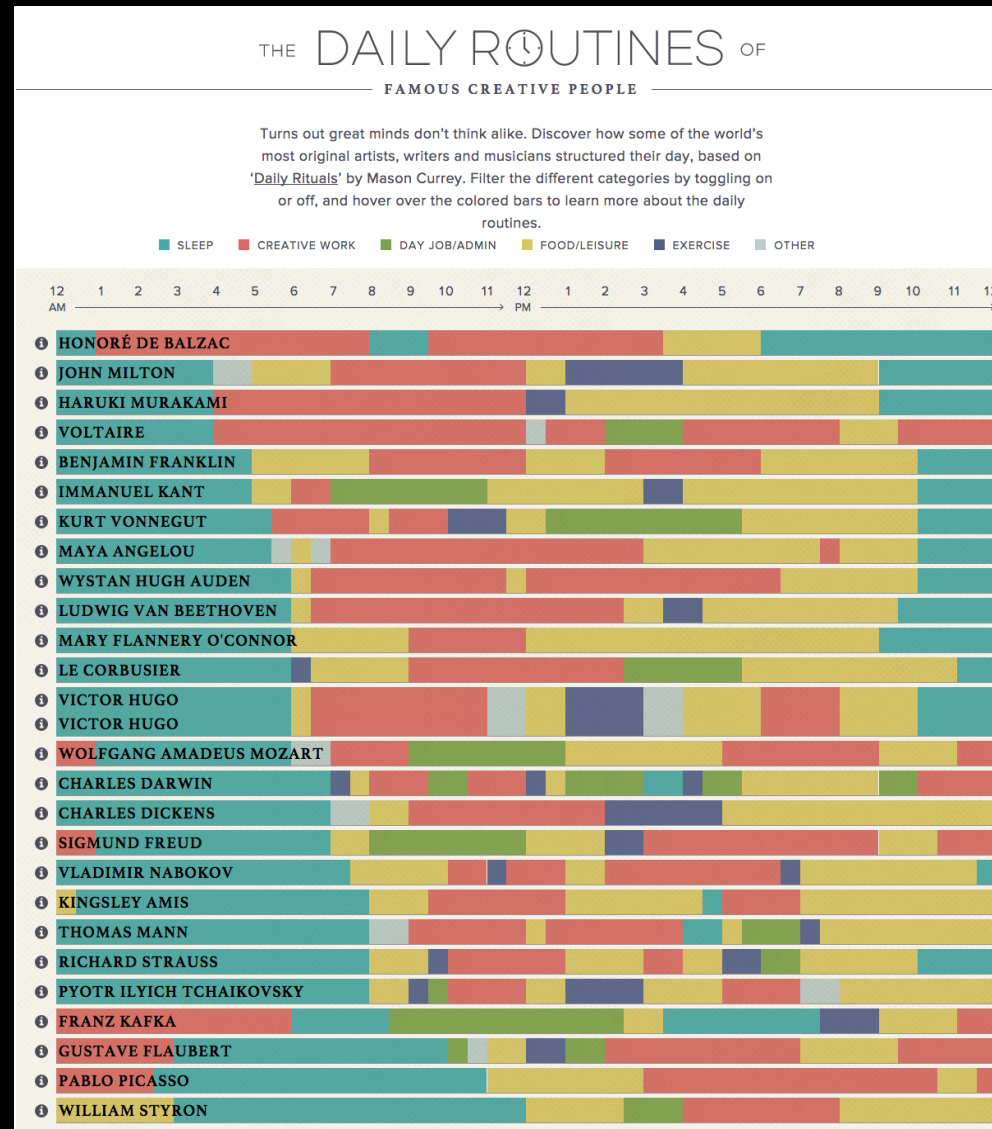

- Best for allowing the audience to **draw their own conclusions**, and offer **objectivity**
- Ideal for understanding **data at a glance**
- **May not** be designed for a **specific data**

InfoGraphic

From <https://www.entrepreneur.com/article/289932>

Data Visualization

From <https://podio.com/site/creative-routines>

How Do We Make a Good Data Visualization?

- **Know the Data**

- Number of attributes
- Data types: ordinal vs ordered (ordinal or quantitative)
- Trustworthiness: bad fields, inaccuracies, missing values

- **Know your purpose (& audience)**

- What do you/they want to see?
- What might you/they want to focus on?

- **Decide how encode the data**

- Requires awareness of:
 - Human perceptual system
 - Display capacity
 - Characteristics of data (size, type)
 - Task

More than every 6th American has no favorite sport to watch

TOP 5 SPORTS TO WATCH - AND OTHERS

America is a football country

but it hasn't always been that way

up until the late sixties, **baseball** was the most popular sport to watch

for the past 50 years, **football** has been the favorite sport of **nearly 40% of Americans**

Visual Encoding

- Marks

- What can we change about a mark?

Visual Variables VARY MARKS

POSITION

changes in the x, y, (z) location

SIZE

change in length, area, repetition

SHAPE

infinite number of shapes

VALUE

changes from light to dark

ORIENTATION

changes in alignment

COLOR

changes in hue at a given value

TEXTURE

variation in pattern

+ Opacity, Sketchiness, Connection, and Containment

Visualization ~~Rules~~ Advice

“Avoid chart junk at all costs”

“Bright colors don't work”

“Never use pie charts”

“No rainbow color-maps”

- These are all very situationally dependent
- Make sure you have reasons for breaking them

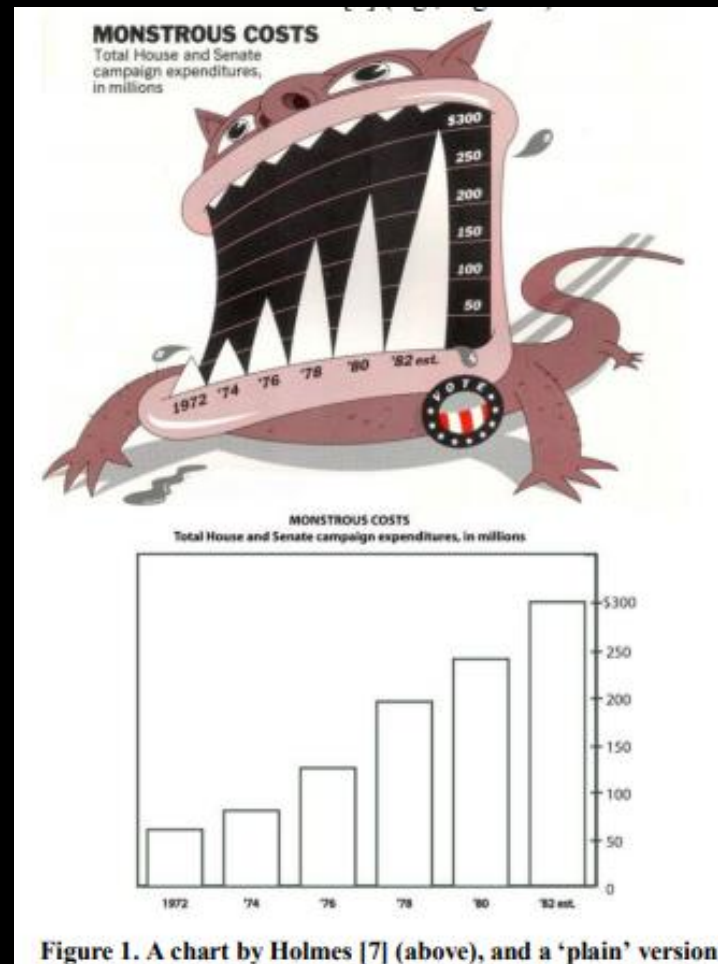

Figure 1. A chart by Holmes [7] (above), and a 'plain' version.

Useful Junk? The Effects of Visual Embellishment on Comprehension and Memorability of Charts

Destroys Detail

Colour

- Use Carefully! Less is more
- Stick to 5-8 colours (less is more)
 - Good contrast
 - Don't clash
 - Works in grayscale and for colour vision deficiencies (no red & green)

Too much colour

Copiers and Fax have gone from second worst to fourth best!

Select Category to Highlight

Copiers and Fax

- Appliances
- Binders and Binder Accessories
- Bookcases
- Chairs & Chairmats
- Computer Peripherals
- Copiers and Fax
- Envelopes
- Labels
- Office Furnishings
- Office Machines
- Paper
- Pens & Art Supplies
- Rubber Bands
- Scissors, Rulers and Trimmers
- Storage & Organization
- Tables
- Telephones and Communication

Cumulative Profit for Copiers and Fax vs. Other Categories

Too many colours

| Colorado | Michigan | Rhode Island |
| Connecticut | Minnesota | South Carolina |
| Delaware | Mississippi | South Dakota |
| District of Columbia | Missouri | Tennessee |
| Florida | Montana | Texas |
| Georgia | Nebraska | Utah |
| Hawaii | Nevada | Vermont |
| Idaho | New Hampshire | Virginia |
| Illinois | New Jersey | Washington |
| Indiana | New Mexico | West Virginia |
| Iowa | New York | Wisconsin |

Life expectancy in each state vs. U.S. average, 1980-2014

Colour Scales

Sequential (dark to light or light to dark)

- Quantitative data or ordered qualitative data
- Single or multiple hues

Diverging (dark in 1 hue to light to dark in a different hue)

- Quantitative data or ordered qualitative data
- Use if there is a meaningful middle point

Categorical

- Qualitative data
- Give hues different brightness so that they appear distinct in grayscale
- Be careful with red & green

Variable	Selective	Associative	Quantitative	Order	Length

Avoid 3D

Examples from <https://clauswilke.com/dataviz/no-3d.html> and <https://www.data-to-viz.com/caveat/3d.html>

Avoid 3D Better solution

When to use 3D?

- When your data has 3D position

Pie Charts – Use Carefully

Donations by Region, 2022

Label slices directly whenever possible (avoid legends). Use leader lines if necessary.

Use thin gaps to separate slices, not border lines (reserve borders for highlighting).

Vary the colors of slices.

Locate labels outside of slices.

Label zero-value parts (unless you're certain that they're truly irrelevant).

Usually, sort the parts, usually from largest to smallest, starting at "12 o'clock," going clockwise.

Avoid highlighting individual slices by "exploding" them. Use borders, darker colors, etc. to highlight.

Small Multiples

Break complicated charts into smaller, simplified charts

Use alignment and repetition to highlight differences

Needs appear in order and same scales, sizes, & shape

Sketching Exercise

- Create a visualization
- Anything you want
 - What interests you in the data?
 - What questions do you have?
- *Challenge:* Try to encode as many properties as possible in your visualization.

Communicate
Efficiency

Investment

Sketching

Fast & easy

- Encourages exploration
- Easier to iterate & discard

Not bound by software / data limitations

Learn about your data / find problems

Explore the “design space” rather than software capabilities

Data Vis Catalog

What do you want to show?

Here you can find a list of charts categorised by their data visualization functions or by what you want a chart to communicate to an audience. While the allocation of each chart into specific functions isn't a perfect system, it still works as a useful guide for selecting chart based on your analysis or communication needs.

Chord Diagram

Description

This type of diagram visualises the inter-relationships between entities. The connections between entities are used to display that they share something in common. This makes Chord Diagrams ideal for comparing the similarities within a dataset or between different groups of data.

Nodes are arranged along a circle, with the relationships between points connected to each other either through the use of arcs or Bézier curves. Values are assigned to each connection, which is represented proportionally by the size of each arc. Colour can be used to group the data into different categories, which aids in making comparisons and distinguishing groups.

Over-cluttering becomes an issue with Chord Diagrams when there are too many connections displayed.

Data Visualization Tools

At academic institutions we see a wide variety of data

Focusing on free

1. Preparing Data
2. Visualization

Data Tools:

Data Wrangler / Alteryx Designer Cloud

DataWrangler^{alpha}

The Alteryx logo, featuring the word "alteryx" in a blue, lowercase, sans-serif font, enclosed within a white rectangular box.

<http://vis.stanford.edu/wrangler>

<https://www.alteryx.com/products/designer-cloud>

- Interactive tool for cleaning & rearranging
- Suggests changes
- Wrangler: web tool – data to external site (1000 lines)
- Import: text, CSV, JSON
- Export: CSV, JSON, TDE (Tableau)

Data Tools: Open Refine

<http://openrefine.org/>

- Consolidate spelling
- Auto-detect outliers
- Sorting & filtering
- Auto-suggests changes
- Import: Excel, XML, JSON, RDF, CSV
- Export: Excel, CSV, ODF, HTML

A screenshot of the Open Refine web interface. The top bar shows "Google Refine" and "guides.openrefine.org". Below the header, there's a "Using Facets and Filters" section with a blue diamond icon. The main area displays a table with 1000 rows. The table has columns for "ID", "Name", "Address", "City", "State", "Zip", "Phone", "Email", "Website", "Created", "Updated", and "Deleted". The first few rows of data are visible, showing various entries with their respective values in these columns.

Data Tools: Tabula

<http://tabula.nerdpower.org/>

- Extract data from PDFs
- Stand-alone app for Windows/Mac
- Interactively select table
- Output: CSV, Excel

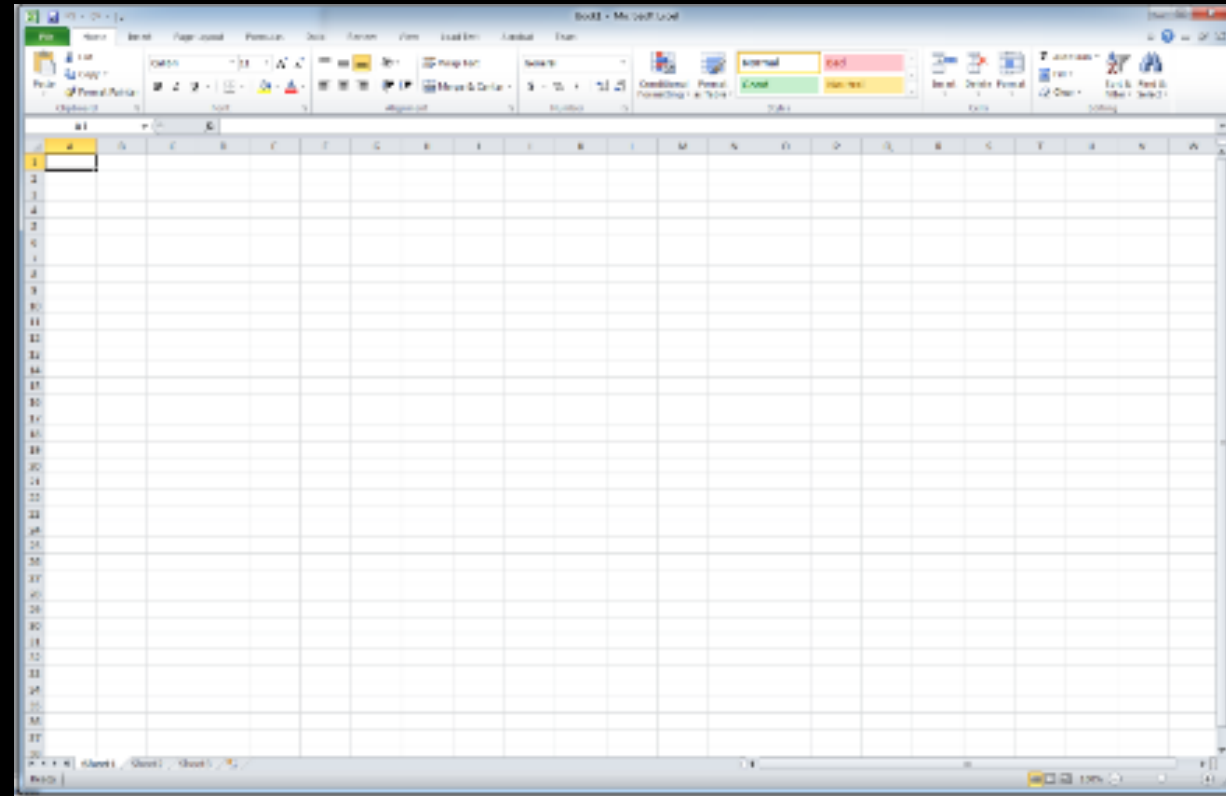

Visualization Tools

- General Purpose
- Special Purpose
 - Text Analysis
 - Sets
 - Maps
 - Networks / Graphs
 - Timelines
- Colour

Excel

- Simple charts
- Hard to customize
- Can do anything!

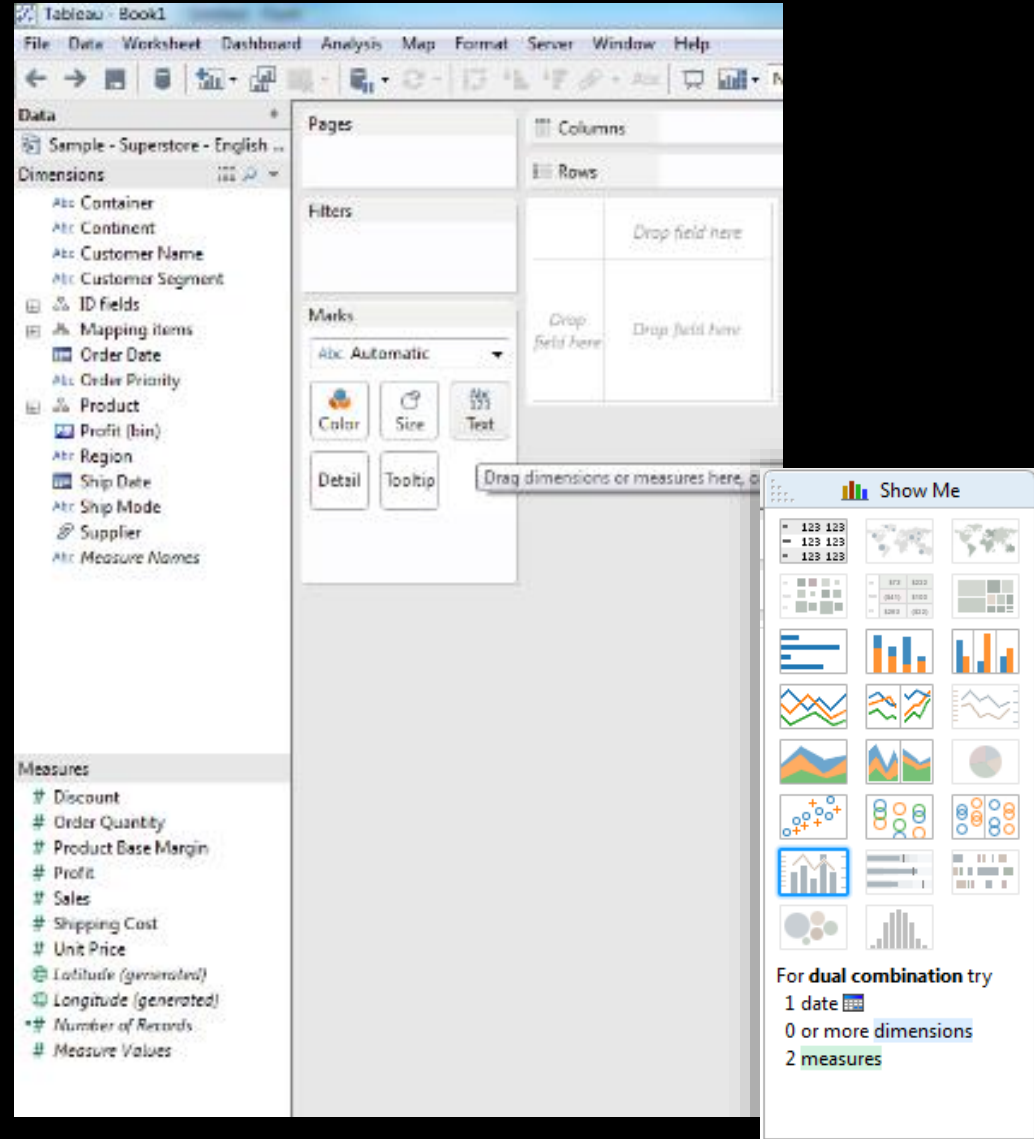

VIS Tools: Tableau

<http://www.tableau.com/>

Strengths:

- Many chart types
- Interactive web output
- Access to underlying data
- Many data sources (live)
- Drag & drop – easy to experiment
- Maps
- Good defaults
- Link visualizations
- R can plugin
- Academic Program - Free for students

Student Program

- Tableau desktop **free** for post-secondary students.
- <http://www.tableau.com/academic>

Academic Programs

Tableau for Teaching

Learn more and get licenses

Tableau for Students

Free access to Tableau Desktop

Administration

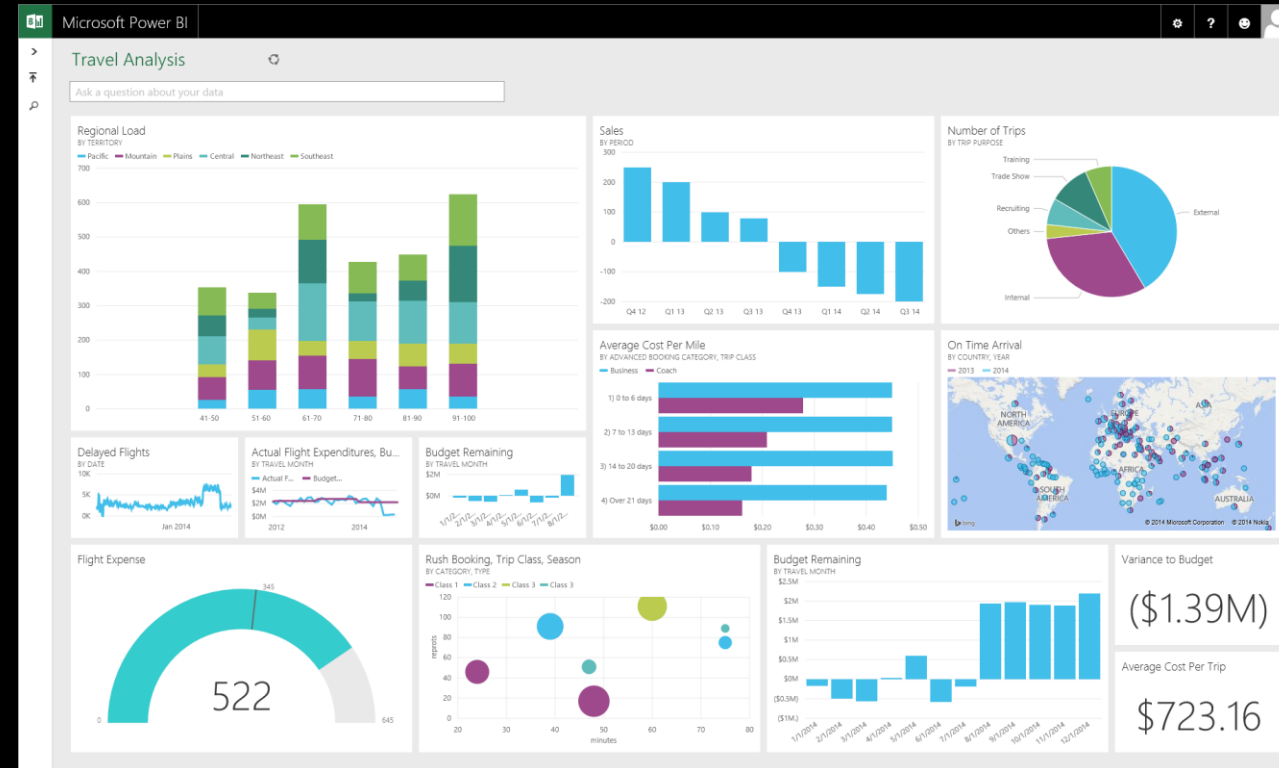

Learn more by visiting our solutions

VIS Tools : POWER BI

<https://powerbi.microsoft.com/en-us/>

- Similar capabilities as tableau
- Can build plugins
- Better data modeling
- Not as customizable
- Exploration not as easy
- Lots of menus
- Less data capacity than Tableau

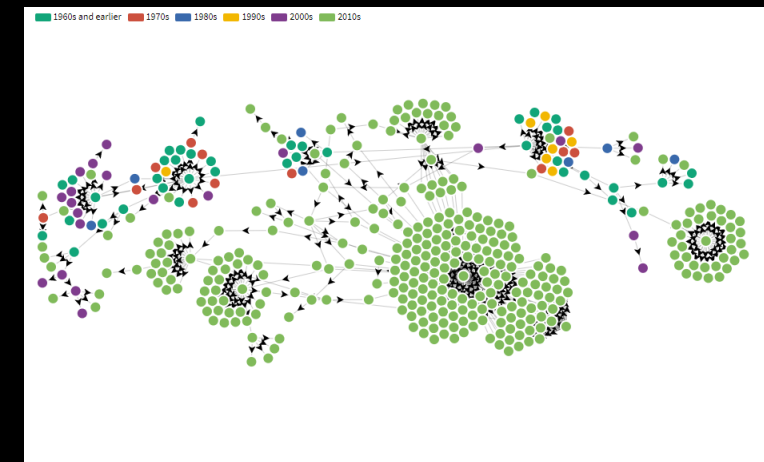

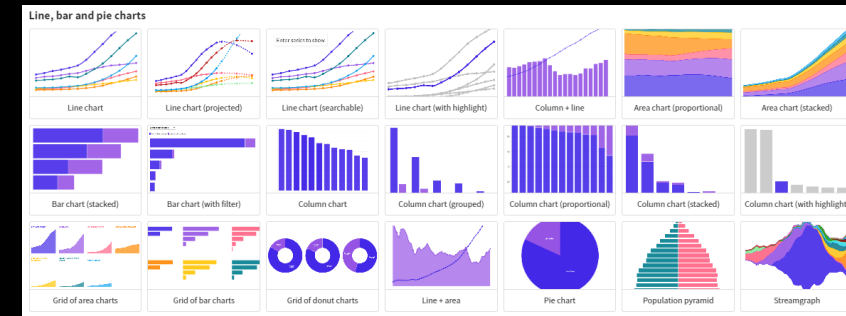

<https://www.em360tech.com/microsoft-power-by-dashboard/>

VIS Tools: Flourish

<https://flourish.studio/>

- Interactive visualizations that can be embedded in websites
- Free (data shared publicly), paid otherwise
- Stick to relatively small datasets

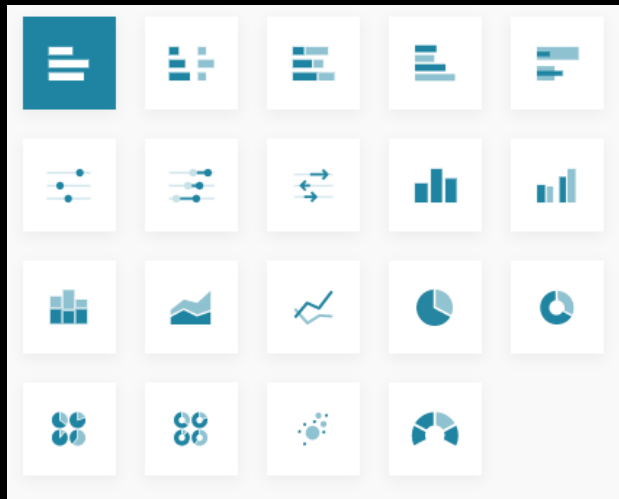

VIS Tools: Datawrapper

Datawrapper

<https://www.datawrapper.de/>

- 20+ chart types
- Variety of mapping types (choropleth, symbols, locator)
- Free, but results have “Created with Datawrapper” watermark and you can only export PNG images (not PDF or SVG).

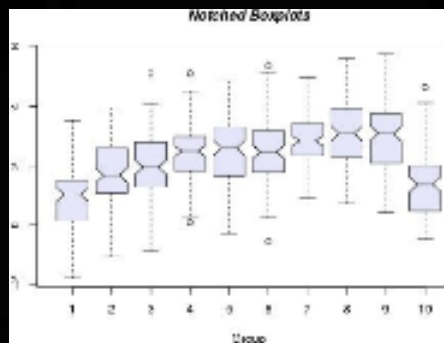

VIS Tools: R

<http://www.r-project.org/>

- Open-source software for statistics & graphics
- All sorts of advanced stats
 - Regression, linear/nonlinear models, time series analysis, clustering, nonparametric tests
- Data wrangling
- Charts & Plots
- Command line*
- Many add-ons (> 4400)
- 60+ Resources for R

<http://www.computerworld.com/article/2497464/business-intelligence/60-r-resources-to-improve-your-data-skills.html>

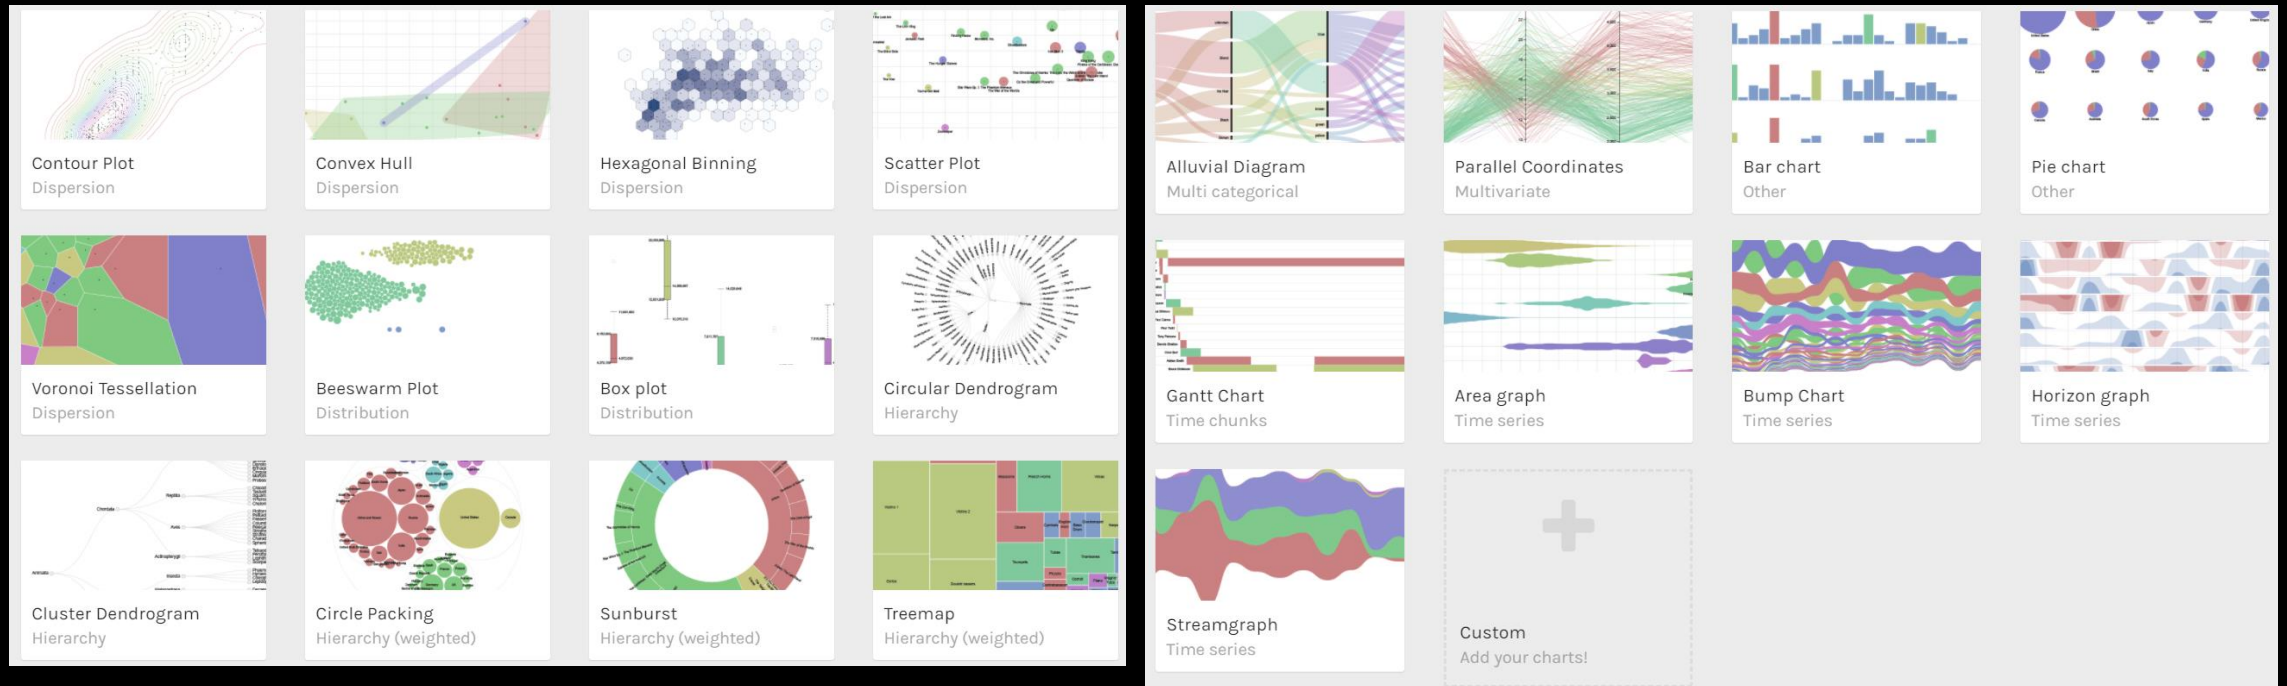

VIS Tools: RAWGraphs

RAWGraphs

<https://rawgraphs.io/>

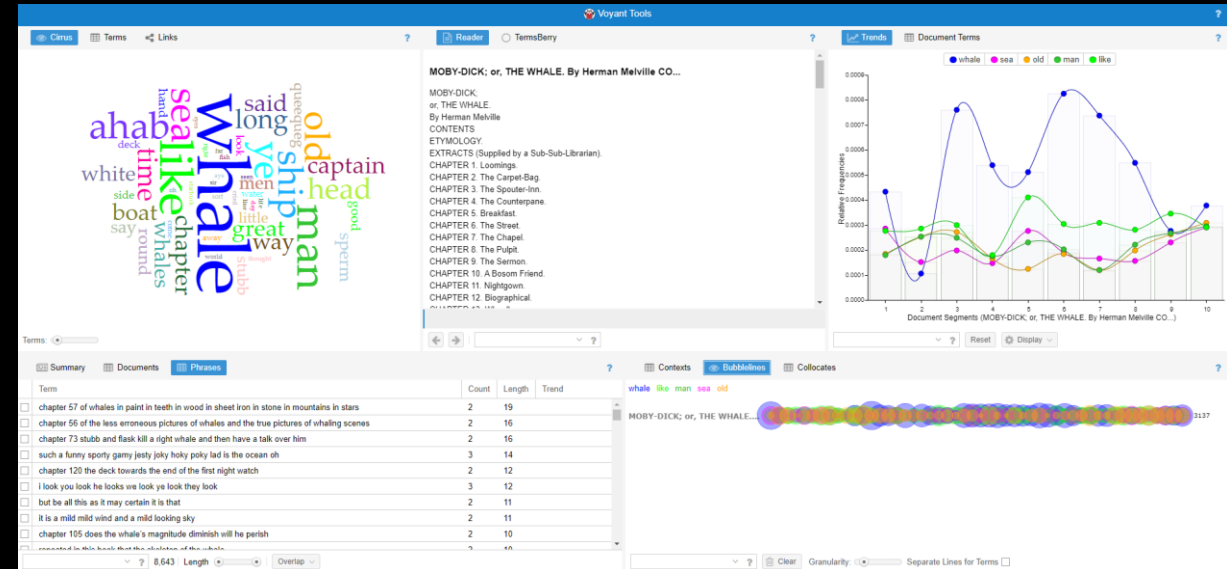

- Create SVG graphics
- Data not uploaded (so remains private)
- 25+ chart types

Text Analysis: Voyant

<http://voyant-tools.org/>

- Import: txt, HTML, XML, PDF, RTF, & Word
- Lexical analysis
 - frequency and distribution
- Export: XML, tsv, html widgets

Sets: UpSet

<https://upset.app>

- Alternative to Venn diagram when you have 4-30 sets.
 - With fewer than 4, use a Venn diagram (e.g., <https://bioinfogp.cnb.csic.es/tools/venny/index.html>).
- Many implementations
 - Web tool, R library, javascript library, etc

Maps/GIS: TILEGRAMS

<https://pitchinteractiveinc.github.io/tilegrams/>

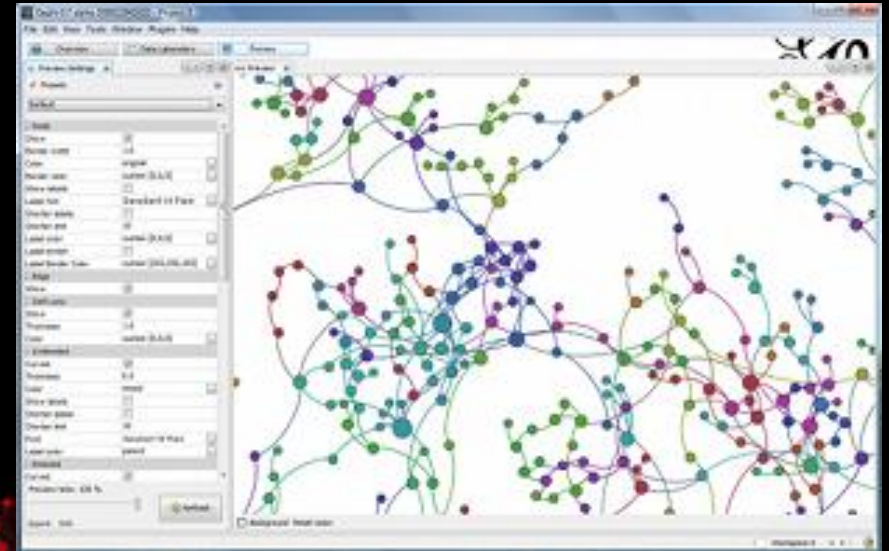

- Generates Cartograms (US, Brazil, Germany, France, Netherlands, Ireland)
- Exports TopoJSON and SVG

Graphs/Networks: Gephi

<http://gephi.github.io>

- Windows/Linux/OS X
- Can handle 50K nodes & 1000K edges
- Interactive
 - Filter
 - Dynamic layout
 - Clustering/hierarchies

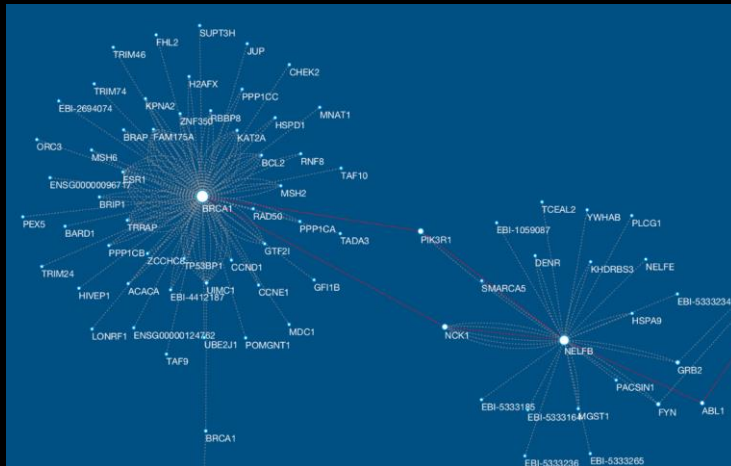

Graphs/Networks: Cytoscape

<https://cytoscape.org/>

- Windows/Linux/OS X
- Created for bioinformatics
- Use cytoscape.js to bring your cytoscape projects to the web
- Apps (plugins) provide extra features

Time: Timeline JS

<http://timeline.knightlab.com>

- Interactive, web timelines
- Link in URLs and web resources
- Build with Google spreadsheet
- Produces embeddable iframe widget

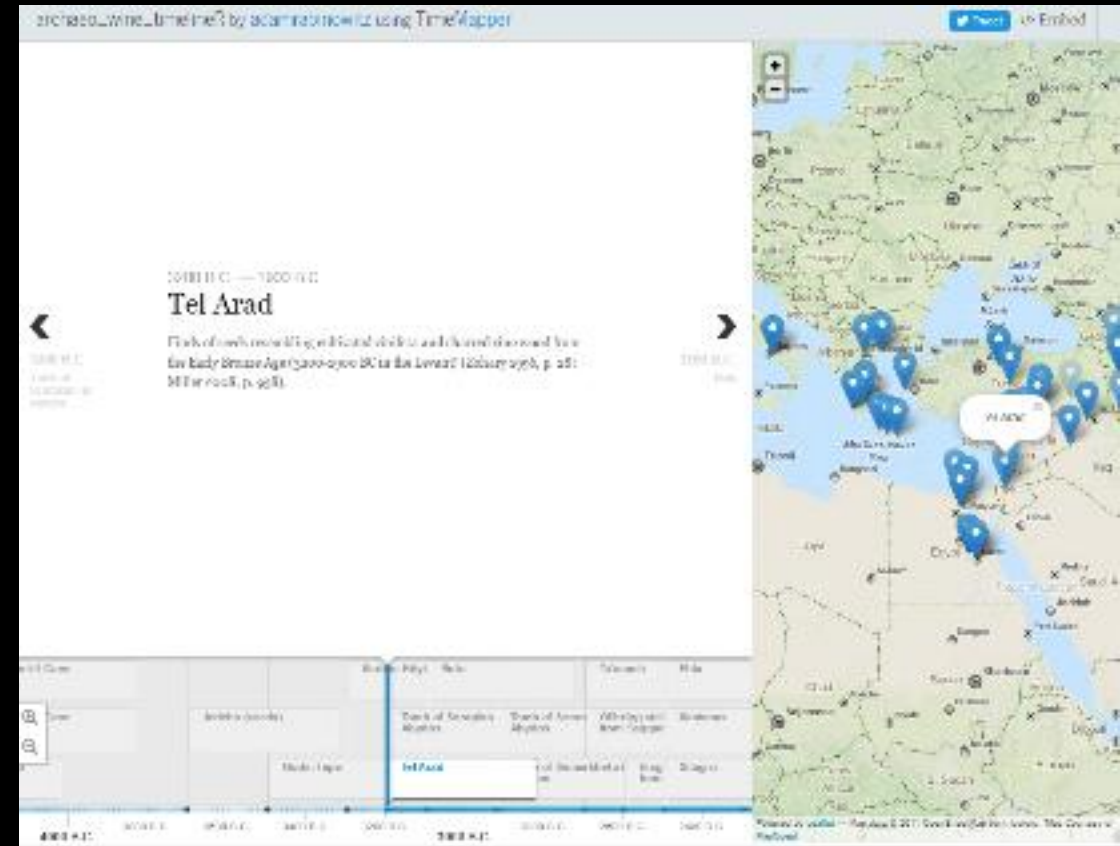

The screenshot displays a Timeline JS widget. The main view shows a historical event on July 16, 2013, titled "Interim government". The event description reads: "An interim government without Islamist parties is sworn in." The event is accompanied by a photograph of a person holding a white banner with the handwritten text "WE SEE EGYPT AS AN ISLAMIC STATE". Navigation arrows are visible on either side of the event. Below the main view, a timeline interface is shown, featuring a horizontal axis with a vertical blue line indicating the current position. The axis is marked with dates from 2011 to 2014. A sidebar on the left contains a list of events, including "Interim government", which is currently selected. At the bottom of the widget, there is a note: "New developments in Egypt since the army ousted President Mohamed Morsi six weeks ago." and a link: "All sources and raw data".

Time: TimeMapper

<http://timemapper.okfnlabs.org>

- Interactive, web timelines
- Built on Google spreadsheet data
- Adds a map with identified locations
- Creates web page that can be embedded into other sites

Colour

Adobe Color

- <https://color.adobe.com/>
- Pick great colour palettes
- Given this colour pick complementary colours

ColorBrewer

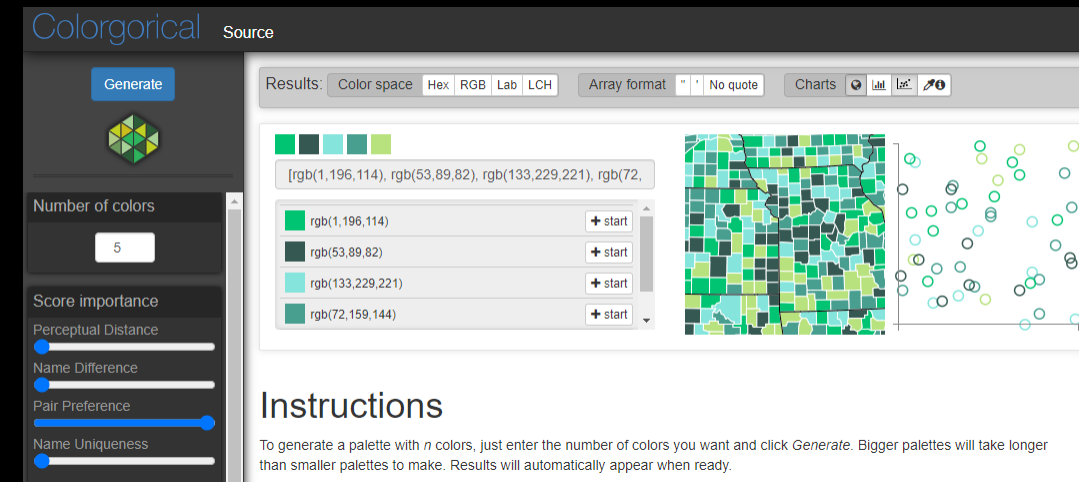

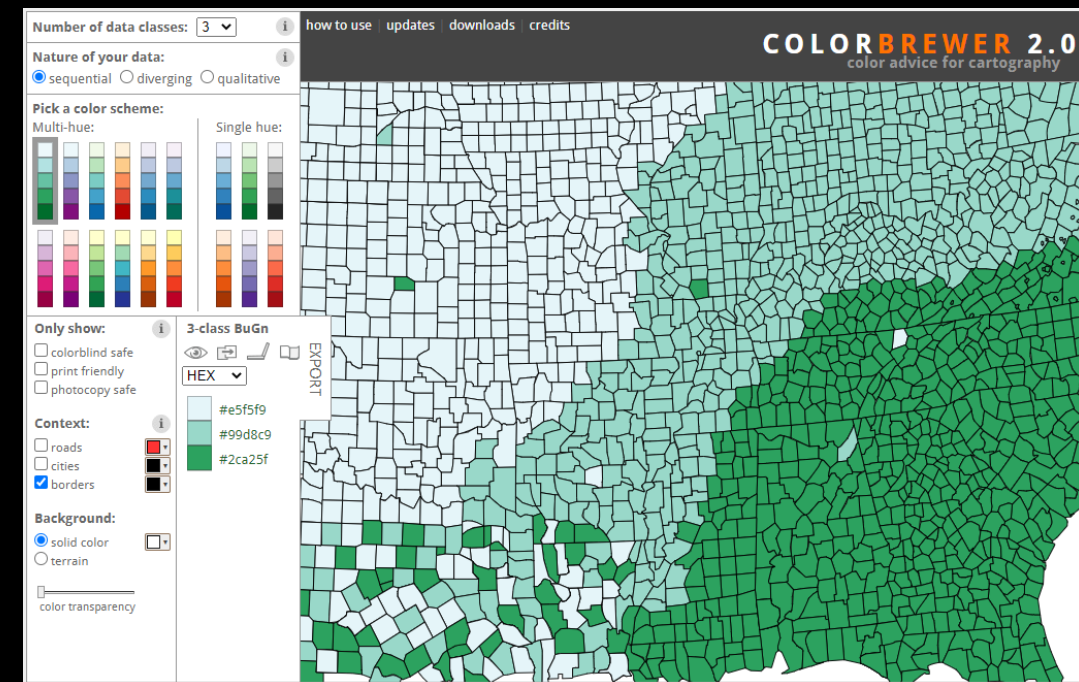

- <http://colorbrewer2.org/>
- Help in choosing colours for maps
- Colourblind, printing, etc.

Colorgorical

- <http://vrl.cs.brown.edu/color>
- More options, shows both maps, bar charts, & scatterplot

Magic Color Picker

- <https://text2color.com/picker.html>
- AI that changes text to RGB colour codes
